Energy Through Time (article) | Khan Academy Through the last few hundred years, we've moved from coal to natural gas, oil, nuclear power, and sustainable energy sources like wind and the Sun. In modern times, demand for energy has surged and we expect it to be reliable and consistently available so we can turn on lights, heat homes, drive cars, email friends, and fly around the world.

Wind - Wikipedia Wind is the flow of gases on a large scale. On the surface of the Earth, wind consists of the bulk movement of air. In outer space, solar wind is the movement of gases or charged particles from the Sun through space, while planetary wind is the outgassing of light chemical elements from a planet's atmosphere into space. Winds are commonly classified by their spatial scale, their speed, the
